Copper based low resistance heating alloys

The copper-based low resistance heating alloy is widely used in low-voltage circuit breaker, thermal overload relay, and other low-voltage electrical product. It is one of the key materials of the low-voltage electrical products. The materials produced by our company have the characteristics of good resistance consistency and superior stability. We can supply all kinds of round wire, flat and sheet materials.

Copper Rod Specification

Copper Stranded Wire

Hard copper stranded wire is also called grounded copper wire and bare copper stranded wire. The raw material is made of high-purity oxygen-free copper rod, which ensures good stability of copper wire and excellent continuous performance of copper wire. Copper stranded wire has good electrical conductivity and is widely used in the manufacture of wire and cable brushes; it has good thermal conductivity and is often used to make magnetic instruments and meters that must be protected from magnetic interference.

Copper Rod Production Process

We Use High-Quality Raw Materials, And Strictly Control The Production Process To Ensure That All Products Are In Line With International Standards Of Quality Products. We Can Provide Third-Party Quality Inspection Certificates, And We Pay Attention To The Reliability Of Product Quality And The Authenticity Of Test Results.
